

To Parjana Inc. Engineering:

The original range design was focused only on the backyard (west portion of the property) Two additional areas outlined in yellow areas also have surface water problem. Please provide additional ranges for each of the areas. It would be helpful to have the range itemized into 1) backyard, 2) side yard and 3) front side yard,. The home owner would be happy to have ½ inch of rain gone from his yard in good condition within the next 3 days. It is hoped that having 3 days to get rid of excess water will keep the cost of the system down.
