Statement of Problem:

Recently a new leak showed up along the North wall after a water pipe to the street was replaced. The leak is near the new pipe location, where the floor meets the wall. Wall crack on West side was filled and hasn't been a problem. Customer wants to reduce hydrostatic pressure on West wall to prevent further destabilization of the block. Leaks occur on South wall near SW corner after most rain events, near cracks in bottom two courses of block.
