

SHELBY, MICHIGAN PROJECT ANALYSIS

SITUATION

July 2012, PARJANA met with a home owner who had chronic seepage and runoff issues. Since 1975, they have been mopping water; scrubbing water stains off the walls and drying out carpeting. They tried numerous method to eliminate their water issues and countless hours of time cleaning up.

SOLUTION

July 2012, an EGRP® System was engineered and installed on the east side of the house.

RESULT-SUCCESS!

August 2012, Since the PARJANA system was installed, there has been no standing water near the basement well, no runoff of water into the window wells or through the window, no seepage through the basement wall and no ground saturation from water. The house is dry and the lawn is drained-No standing water.

TESTIMONIAL

"I fully feel confident that the PARJANA System has performed up to and beyond expectations and that the basement of my house will continue to be free of the water issues that we've had for 38 years because of the system. I would recommend that anyone who has similar water seepage and/or runoff issues consider the PARJANA system"

-Home Owner
